ABOUT

Product designer and front-end developer based in Lusaka. I design interfaces and build them myself, from the first wireframe to a shipped product: a marketplace redesign for a client, a Windows game tracker I designed and built end to end, and the interface of a browser-based video editor. I care about clear hierarchy, design systems that hold up in code, and details that survive the build. Open to freelance projects and full-time roles.

EXPERIENCE

Product Designer and Frontend Developer

April 2026 – Present

Metina Platforms

- Redesigning Metibuy, the company's 10+ page marketing site, owning both product design and frontend implementation.
- Leading the upcoming redesign of the main Metina Platforms product.

Freelance Product Designer

April 2025 – Present

Independent

- Partnering with clients to define product goals, user needs, and visual identity for digital products.
- Handling the end-to-end design process from discovery through developer handoff.
- Applying iterative design thinking to solve real business problems for startups and independent brands.

Product Design Intern

Nov 2024 – March 2025

Baboons

- Designed responsive landing pages, including the published Cafe de Snor site.
- Built component libraries and documented UI foundations across multiple client projects.
- Prepared hi-fi assets and specs for smooth design-to-dev handoff.
- Contributed to competitive research, weekly critiques, and interactive client prototypes.

SKILLS

UX

User Research, Personas, Wireframing, Information Architecture, User Flows

UI

Visual Design, Typography, Grid Systems, Component Design, Responsive Layouts

TOOLS

Figma (Auto Layout, Variables, Components), Prototyping

FOCUS AREAS

Mobile Design, Landing Pages, SaaS Dashboards, Design Systems

FRONTEND

I'm a product designer first. I use AI like any other tool: I drive it, review what it produces, and own the architectural decisions. So the projects I build are mine end-to-end, from Figma to deploy.

CORE

TypeScript, React, Next.js

UI

Tailwind CSS, Design tokens, Responsive layouts

MOTION

GSAP, Lenis, Lottie, Framer Motion

STATE & DATA

Zustand, REST, GraphQL

TOOLING

Git, Vercel

Currently learning: accessibility (keyboard, ARIA, reduced-motion) and testing with React Testing Library.

SELECTED PROJECTS

Metibuy ↗

Marketplace Redesign · Client work

Redesigned the front end of a live marketplace where people shop and sellers run their own stores: landing page, shopping, checkout, seller tools and admin, built on the client's existing backend.

PlayTime ↗

Game-Time Tracker for Windows · Own product

A Windows app that counts your hours in every game, not just Steam's. Designed and built the whole product: the desktop app, its design system, and the website that sells it.

Skeet ↗

Video Editor in the Browser · Contract, 2 months

UI/UX for a video editor that runs in a browser tab, with a real timeline, a colour suite, and an AI assistant that has already watched your footage. Designed alongside the developer building the app.
